

AN NGO, WORKING FOR
KIDS WHO ARE DRUG
ADDICTS AND
REHABILITATING THEM.

CASE STUDY

Challenges

- There was no system to track progress and check the attendance of the kids in the rehab area.

Our Solution

Solution

- Using the salesforce nps package, we configured the basic data model for the NGO.
- Using experienced cloud and custom lighting web components, we created a form through which registration could be done and process updates could be entered in the system by different volunteers working with them.
- Data upload for the existing data was done.

Benefits

- Single system helped the NGO in managing information easily. This was a very tedious task in the multiple system.
- Reporting on data became very easy.
